Abstracts

This report studies the Dump Truck market. Though there are several different dump truck designs, the basic components of dump trucks remain more or less the same for all of them. The main body of the dump truck is generally based on that of a flatbed truck, with one axle beneath the cab and anywhere from one to three axles beneath the dump box. The dump box itself generally has a tailgate that is hinged at the top so that it will open automatically when it is being dumped. The dumping mechanism is powered hydraulically in order to prevent compression problems that can sometimes be encountered when using pneumatic systems. The engine of the dump truck can be either gasoline-powered or diesel-powered, but is generally a large internal combustion engine regardless of the fuel type used.

The global average price of Dump Truck is in the decreasing trend, from 41.4 K USD/Unit in 2012 to 38.7 K USD/Unit in 2016. With the situation of global economy, prices will be in decreasing trend in the following five years.
