Duodenoscopes are flexible, lighted tubes that are threaded through the mouth, throat, and stomach into the top of the small intestine (duodenum). They are used during endoscopic retrograde cholangiopancreatography (ERCP), a potentially life-saving procedure to diagnose and treat problems in the pancreas and bile ducts.

The classification of Duodenoscope includes Fiber Duodenoscope and Electronic Duodenoscope. The proportion of Electronic Duodenoscope in 2016 is about 86.3%, and the proportion of Fiber Duodenoscope in 2016 is about 13.7%. Electronic duodenoscope is the development trend in the future. Electronic Duodenoscope used for endoscopic retrograde cholangiopancreatography (ERCP), etc. Imaging is clearer than fiber duodenoscope.

Duodenoscope is application in Diagnostic and Therapeutic. The most of Duodenoscope is used in Diagnostic, and the market share in 2016 is about 69%. Duodenoscopes are flexible, lighted tubes that are threaded through the mouth, throat, and stomach into the top of the small intestine (duodenum). They are used during endoscopic retrograde cholangiopancreatography (ERCP), a potentially life-saving procedure to diagnose and treat problems in the pancreas and bile ducts. In the United States, duodenoscopes are used in more than 500,000 ERCP procedures each year. Duodenoscopes are complex instruments that contain many small working parts. If not thoroughly cleaned and disinfected, tissue or fluid from one patient can remain in a duodenoscope when it is used on a subsequent patient. In rare cases, this can lead to patient-to-patient infection.

Market competition is not intense. Olympus is the leader of this industry. Olympus controls 85% of the US market for duodenoscope. With the development of society and the changing of consumer demand, the Duodenoscope industry will be more and more popular in the future.

The global Duodenoscopes market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
