Abstracts

Edible gold is a particular type of gold authorized by the European Union and the United States as a food additive, under the code E 175. It is used in the haute cuisine in a gastronomical trend towards extravagant meals. It can be employed in foods and beverages such as in cookies decoration, wines or liquors; as sushi garnishment; or over ice cream. There are neither negative effects nor benefits from eating gold since it is biologically inert, and it is suitable for use in food since it does not oxidize or corrode in moist air, unlike many other metals.

According to QYResearch's new survey, global Edible Gold Beverage market is projected to reach US\$ 1453.4 million in 2029, increasing from US\$ 856 million in 2022, with the CAGR of 7.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Edible Gold Beverage market research.

The food market includes both fresh and processed foods. According to our research, the global food and beverage market has a sales revenue of approximately US\$10 trillion. China is the world's number one food and beverage market and the world's number one food and beverage producer. In the market drivers section, the total consumer spending forecast shows that consumption at home is growing faster than consumption away from home. However, food service continues to become increasingly important due to changing lifestyles. In addition, the rise of private label brands is putting pressure on the margins of brand manufacturers as retailers compete for a higher share of product sales.

Report Scope

This report, based on historical analysis (2018-2022) and forecast calculation (2023-2029), aims to help readers to get a comprehensive understanding of global Edible Gold Beverage market with multiple angles, which provides sufficient supports to readers' strategy and decision making.
