Abstracts

The educational robot is specially developed by the manufacturer in order to stimulate students' interest in learning, cultivate students' comprehensive abilities. It can be robot products, kit or parts. In addition to the robot body itself, there are corresponding control software and teaching textbooks and so on. Because of adapting to the new curriculum, educational robot has played a positive role in the cultivation and improvement of students' scientific literacy.

Major factors driving growth of this market include the increasing investment in education industry by Government and Non-governmental organization, the progress of robot manufacturing technology and the decrease of production cost. Furthermore a vast market demand is the key driving factor.

Wheeled robots are the largest segment in the educational robots market and are expected to occupy around 56% of the total market share. These robots are assembled in the shape of toys and are mainly used in elementary schools to engage and teach students. These robots are expected to be very much in demand because of the rising number of government initiatives in the deployment of students-friendly wheeled robots this segment sales is expected to grow at a CAGR of more than 5.14% during the forecast period.

South of USA market is expected to become the fastest growing market, increasing product mutuality and availability is the key point.

South of USA is poised to grow at the highest CAGR during the forecast period owing to the increasing investment in education industry by local government, the increase in disposable income of local residents in this region, and rising focus of prominent players in this market increasing technology level.

The average price will fall further

The product average price declined in the past few years due to the technology development, the average price will keep this trend in the few future years due to

increasing mature manufacturing technology and lowering cost of raw materials. Strong market competition is resulting in annual 2 percent price erosion.
