Abstracts

An electric actuator is powered by a motor that converts electrical energy into mechanical torque for moving or controlling a mechanism or system. The electrical energy is used to actuate equipment such as multi-turn valves. It is one of the cleanest and most readily available forms of actuator because it does not involve oil.

Electric actuators are sub-branch of actuators which also include hydraulic fluid pressure actuators, or pneumatic pressure actuators, etc.

The market segment by three types: Linear Electric Actuator, Multi-turn Electric Actuator and Quarter-turn Electric Actuator. The applications of Electric Actuator are Oil & Gas, General Industries, Chemical, Power and Other industries. Oil & Gas and General Industries are the main application, which accounts for about 56.51% of total consumption in 2017.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
