Abstracts

Most electric motors are designed with grease-lubricated, antifriction, rolling-element bearings. Grease is the lifeblood of these bearings because it provides an oil film that prevents the harsh metal-to-metal contact between the rotating element and races.

According to QYResearch's new survey, global Electric Motor Bearing Grease market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Electric Motor Bearing Grease market research.

For product types, lithium-based grease is commonly used for small and medium-sized motor bearings in China, while motor bearings on important equipment tend to use high-performance mid-priced grease in North America and Europe, and polyurea-based grease is an important development direction for high-performance motor grease.
