Electric Propulsion (EP) is a class of space propulsion which makes use of electrical power to accelerate a propellant by different possible electrical and/or magnetic means. An electrically powered spacecraft propulsion system uses electrical energy to change the velocity of a spacecraft. Most of these kinds of spacecraft propulsion systems work by electrically expelling propellant at high speed.

Worldwide, there are a little electric propulsion system manufacturers; and there is growing number of enterprises are entering the market attracted by the market potential. Aerospace Corporation, SITAEL and Bellatrix Aerospace are the top there manufacturers of electric propulsion system in the market currently; they account more than half of the market total production volume of electric propulsion system.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
