## Abstracts

A significant increase in the demand for electric vehicles, a large volume of batteries reaching their end-of-life, decreasing the life expectancy of EV batteries, and the scarcity of battery raw materials are likely to drive the EV recycled battery materials market.

According to QYResearch's new survey, global Electric Vehicle Recycled Battery Material market is projected to reach US\$ 5108.2 million in 2029, increasing from US\$ 1683 million in 2022, with the CAGR of 17.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Electric Vehicle Recycled Battery Material market research.

Global EV sales continued strong. A total of 10.5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.
