## Abstracts

This report studies the global Electromechanical Switch market status and forecast, categorizes the global Electromechanical Switch market size (value & volume) by key players, type, application, and region. This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Electromechanical relay switch low insertion loss ( 85dB), and it may millisecond speed switching signal. The main advantage of this type of switch is that it can be (> 50 GHz) in the working frequency range DC ~ millimeter wave, and is not sensitive to electrostatic discharge. In addition, the electromechanical relay switch can handle high power levels (up to several kW peak power) video leakage does not occur.

With the increasing in production capacity, expected that the electromechanical switches raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of electromechanical switches.

The average price of electromechanical switches will fall further. The product average price declined in the past few years due to the technology development, the average price will keep this trend in the few future years due to increasing mature manufacturing technology, cost of raw materials, as well as the substitute threat.

The global Electromechanical Switch market is valued at 4580 million US\$ in 2017 and will reach 4510 million US\$ by the end of 2025, growing at a CAGR of -0.2% during 2018-2025.
