## Abstracts

Electron Beam Melting (EBM) is part of the powder bed fusion family. Unlike Laser Powder Bed Fusion (LPBF), it uses, as its name suggests, an electron beam to fuse metal particles and create, layer by layer, the desired part. Marketed by the Swedish company Arcam in 2002, this process enables the creation of complex and highly resistant structures.

According to QYResearch's new survey, global Electronic Beam Melting (EBM) 3D Printer market is projected to reach US\$ 356.9 million in 2029, increasing from US\$ 214 million in 2022, with the CAGR of 7.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Electronic Beam Melting (EBM) 3D Printer market research.

3D printing, also known as additive manufacturing, is a manufacturing method based on a digital model file, using powdered metals, plastics and other materials to lay out the print layer by layer, and finally form a three-dimensional object. Currently, it has been gradually applied in industrial design, aerospace, construction, medical and other fields to print models, parts and even final products. According to our research, the global 3D printing market size is about \$15.3 billion in 2022, with the highest share coming from 3D printing services. The industry that uses 3D printing the most is the automotive industry, which is a distant second, followed by the consumer/electronics sector and aerospace. The current global 3D printing head players are mainly concentrated in the US.
