An electronic component is any basic discrete device or physical entity in an electronic system used to affect electrons or their associated fields. Electronic components are mostly industrial products, available in a singular form and are not to be confused with electrical elements, which are conceptual abstractions representing idealized electronic components.

The Electronic Components industry concentration is not high; there are more than one thousands manufacturers in the world, and high-end products mainly from USA, Japan and European.

Company mergers and acquisitions, and inter-companies cooperation have occurred for development and growth. As the downstream consumption usually follows with developed and rapid economic growth areas, such as BRICS, the developed areas' company prefers investing to underdevelopment regions these years.

The global Electronic Components market is valued at 331200 million US\$ in 2017 and will reach 417300 million US\$ by the end of 2025, growing at a CAGR of 2.9% during 2018-2025.
