## Abstracts

Electronic Patch Panel, or Intelligent patch panels, are much like normal patch panels, allowing cables from the network devices to connect to connect to individual ports in them and in-turn connecting each port to their appropriate network switch ports / other network devices using patch cords. Unlike normal patch panels, they require power-supply and may have LED indicators for each port and centralized LCD display indicator for all ports.

According to QYResearch's new survey, global Electronic Patch Panel market is projected to reach US\$ 4447.2 million in 2029, increasing from US\$ 2536 million in 2022, with the CAGR of 8.4% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Electronic Patch Panel market research.
