## Abstracts

The electronic total station (TPS) is an electronic/optical instrument used in modern surveying and building construction. The total station is an electronic theodolite (transit) integrated with an electronic distance meter (EDM) to read slope distances from the instrument to a particular point. It is used to measuring distances, heights and angles to provide accurate position data.

SOUTH, FOIF, TJOP and DAD captured the top four Chinese local revenue share spots in the Electronic Total Station market in 2015. South dominated with 53.99 percent revenue share, followed by FOIF with 13.75 percent revenue share and TJOP with 7.06 percent revenue share.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
