This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

The electronic total station (TPS) is an electronic/optical instrument used in modern surveying and building construction. The total station is an electronic theodolite (transit) integrated with an electronic distance meter (EDM) to read slope distances from the instrument to a particular point. It is used to measuring distances, heights and angles to provide accurate position data.

SOUTH, FOIF, TJOP and DAD captured the top four Chinese local revenue share spots in the Electronic Total Station market in 2015. South dominated with 53.99 percent revenue share, followed by FOIF with 13.75 percent revenue share and TJOP with 7.06 percent revenue share.

Despite the presence of competition problems, due to the clear global recovery trend, investors are still optimistic about this area, in future still more new investment will enter into the field. Technology and cost are two major problems.

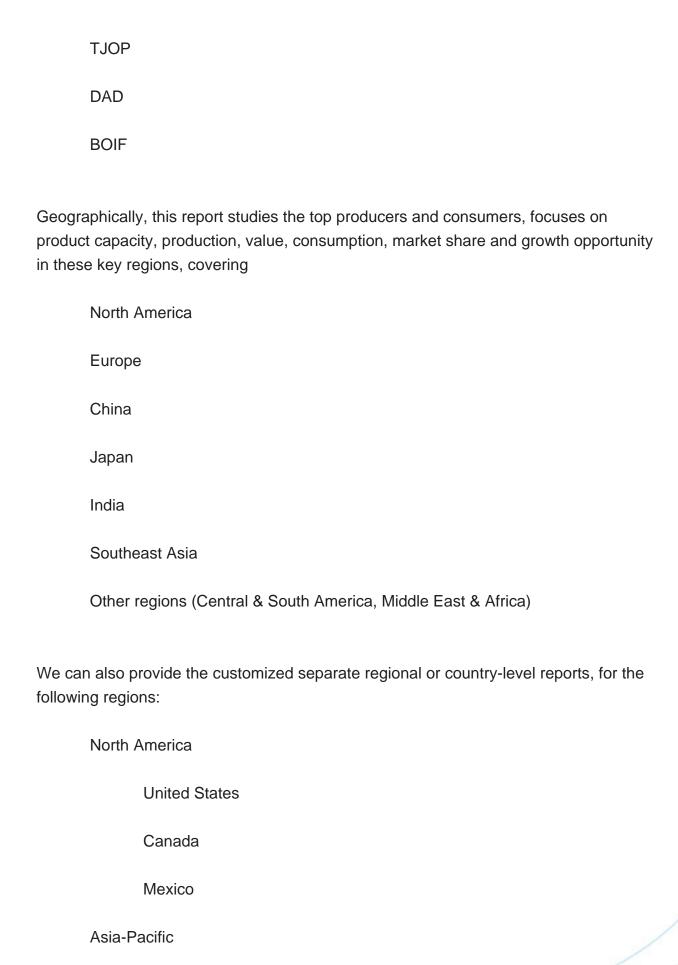

The global Electronic Total Station market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
