Abstracts

Electroactive Polymers are polymers that exhibit a change in size or shape when stimulated by an electric field. A typical characteristic property of an EAP is that they will undergo a large amount of deformation while sustaining large forces. In the field of “active materials”, electroactive polymers stand out due to their large active deformation potential, high response speed, low density and improved resilience.

According to QYResearch’s new survey, global Electronic Type Electroactive Polymers market is projected to reach US\$ 5258.4 million in 2029, increasing from US\$ 3145.8 million in 2022, with the CAGR of 7.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Electronic Type Electroactive Polymers market research.

The future of the high-performance material market looks promising with opportunities in the construction, automotive, electrical, and food & beverages applications. The global high-performance material market is expected to grow with a CAGR of 9% to 11% from 2023 to 2029. The major drivers for this market are high-quality components demand from designers are increasing, rising demand in end-use sectors, and increasing number of manufacturers and suppliers in the fluid handling industry.
