An emergency power system is an independent source of electrical power that supports important electrical systems on loss of normal power supply. A standby power system may include a standby Emergency Power System, batteries and other apparatus. Emergency power systems are installed to protect life and property from the consequences of loss of primary electric power supply. Emergency Power systems can be summarized into two types:-

Emergency Power Systems Partial Protection—Partial protection comprising only standby diesel generators which will start automatically within 5-10 seconds of any mains power loss.

Emergency Power Systems Total Seamless Protection—Total power protection comprises not only standby diesel generators that will start automatically within 5-10 seconds of any mains power loss but also uninterruptible power supplies (UPS Power) that cover the short break of power whilst the generators start up.

Emergency Power Systems are instinctively used by Hospitals Financial Institutions
Data Centres Security Forces Banks or any mission critical site where the loss of power
however momentarily, would cause incalculable disruption.

Currently, there are many producing companies in the world. The main market players are EATON, Schneider-Electric, Emerson, GE, Caterpillar, ABB, AEG, Generac, Briggs & Stratton, Kohler, Socomec, Borri, and DAEL etc.
