EMI (Electromagnetic Interference)/RFI (Radio Frequency Interference) Filter, an EMI/RFI filter is an electronic device which is used in order to suppress conducted interference that is present on a signal or power line. EMI filters can be used to suppress interference that is generated by the device or by other equipment in order make a device more immune to electromagnetic interference signals present in the environment.

Demand for EMI/RFI Filters has mainly been driven by downstream demand. National policies are the main growth catalysts for the market.

Geographically, Asia-Pacific(W/O Japan) was the largest market in the world, which took about 39.06% of the global consumption volume in 2015. North America rank as No.2 by shared 18.22% of global total consumption volume, Japan shared 17.35%.

The EMI/RFI Filters market concentration degree is relatively lower. The manufacturing bases scatter around the world in terms of geography; the global leading players in this market are Murata, Schaffner, NXP Semiconductors, TDK, Nec Tokin and AVX, which accounts for about 39.28% of total revenue in 2015.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have some new investment enter the field. In the next five years, the sales volume will keep increase and the market revenue scale is forecasted to be increased too.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the EMI RFI Filters 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its
