Abstracts

Endoscopy is a procedure that is carried out using a thin, long, flexible tube called the endoscope. An endoscope is inserted inside the body to retrieve images and to carry out surgical procedures. The endoscope can be inserted into the body through natural opening such as the mouth or by making a small incision. Endoscopy is done to investigate unusual symptoms or to perform certain surgeries. Endoscopic channel cleaning brushes are used to keep the endoscopes clean. These brushes vary in diameter, length, and style to cater to the cleaning needs of endoscopes. The endoscopic channel cleaning brushes are used to remove debris that might be lodged in the dials, channels, and valves of the endoscopes.
