Abstracts

Enteroviruses are a group of viruses which cause mild or moderate symptoms such as fever, cold and infectious conditions. Enterovirus can be dangerous if the infection spreads to the central nervous system. Enteroviruses mostly spread due to contact with the saliva or sputum of an infected person. Enteroviruses can create complications in individuals with health conditions such as pneumonia, brain diseases, and heart conditions. Enteroviruses kit uses PCR (polymerase chain reaction) method to make billions of copies of extracted DNA from the human sample for detailed study in laboratories. Enterovirus kits are ready to use detection kits, in which extracted DNA from the human body is added to ready to use PCR (polymerase chain reaction) master mix. Moreover, enterovirus kits include all necessary reagents which are used to detect the virus.

According to QYResearch's new survey, global Enteroviruses Testing Kit market is projected to reach US\$ 1314.7 million in 2029, increasing from US\$ 826 million in 2022, with the CAGR of 6.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Enteroviruses Testing Kit market research.

Life science reagents are the fundamental materials for life science research and development, and are widely used as consumable tools in life science research activities. According to Frost&Sullivan's data, the global market size of biological reagents has reached US \$12.8 billion in 2015 and US \$17.5 billion in 2019, with a Compound annual growth rate of 8.1%.
