Abstracts

ELISAs (Enzyme-linked immunosorbent assays) are routinely used for the qualitative and quantitative assessment of cytokines, chemokines, growth factors, phosphorylated targets, immunoglobulins and other immunological markers. Detection and quantitation of protein analytes from various biological samples—serum, plasma, cell culture supernatants and cell lysates—indicate a multitude of biological and pathological events. ELISAs have proven to be valuable tools in drug development as they are commonly used for biomarker profiling of disease vs. normal states, as well as toxicity profiling. The global average price of ELISA is in the decreasing trend, from 211 USD /Unit in 2011 to 196 USD/ Unit in 2015. with the situation of global economy, prices will be in decreasing trend in the following five years.

the classification of ELISA includes ELISA Sets ELISA Kits, and the proportion of ELISA Kits in 2015 is about 61%.ELISA is widely used in IVD testing field.

USA is the largest supplier of ELISA, with a production market share nearly 48% in 2015. Europe is the second largest supplier of ELISA, enjoying production market share nearly 34% in 2015.

North america is the largest consumption place, with a consumption market share nearly 40% in 2015. following north america, europe is the second largest consumption place with the consumption market share of 26%. China is the world's largest import country.

market competition is not intense. R&D Systems and Thermo Fisher Scientific, are the leaders of the industry, and they hold key technologies and patents, with high-end customers; have been formed in the monopoly position in the industry.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
