Abstracts

Estrogen replacement therapy (ERT) is a type of hormone replacement therapy which is used for the treatment or reduction of various symptoms caused as a result of menopause.

According to QYResearch's new survey, global Estrogen Replacement Therapy market is projected to reach US\$ 9833.8 million in 2029, increasing from US\$ 8579.3 million in 2022, with the CAGR of 2.0% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Estrogen Replacement Therapy market research.

The estrogen replacement therapy market is driven by the increasing aging population and growing awareness about the importance of managing hormonal imbalances, especially in postmenopausal women. Estrogen replacement therapy helps alleviate menopausal symptoms such as hot flashes, night sweats, and mood swings, contributing to its demand. Moreover, advancements in medical research have led to the development of innovative and safer formulations of estrogen replacement therapy, boosting market growth. However, challenges include concerns about potential health risks associated with long-term usage, such as an increased risk of certain cancers and cardiovascular diseases. Striking a balance between the benefits and risks of estrogen replacement therapy and ensuring proper patient education will be crucial for the sustained growth of the market.
