Abstracts

Ethyl 3-ethoxypropionate is a slow evaporating ether-ester solvent with excellent activity for a wide range of coating polymers. Its linear structure and propionyl group in the center of the molecule give this material a combination of desirable properties not found in other solvents. These include a slow evaporation rate, good resistance to solvent popping in baking applications, a moderate odor, low surface tension and high electrical resistance. In addition, it yields low polymer solution viscosities when compared to solvents with similar evaporation rates, provides excellent solvent release from coating films, and gives exceptional flow and leveling with a wide range of coatings. It is supplied as a urethane grade solvent.

The increased use of Ethyl 3-ethoxypropionate to identify network issues is one of the major drivers of the market. Ethyl 3-ethoxypropionate solutions eliminate manual monitoring of IT infrastructure, enabling quick identification of flaws in the security system. This helps end-users save time and money.
