Abstracts

This report studies the global Excimer and Femtosecond Ophthalmic Lasers market status and forecast, categorizes the global Excimer and Femtosecond Ophthalmic Lasers market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China and other regions (India, Southeast Asia, Central & South America, and Middle East & Africa).

Mode-locking is a technique in optics by which a laser can be made to produce pulses of light of extremely short duration, on the order of picoseconds (10^{-12} s) or femtoseconds (10^{-15} s). A laser operated in this way is sometimes referred to as a femtosecond laser, for example in modern refractive surgery. The basis of the technique is to induce a fixed-phase relationship between the longitudinal modes of the laser's resonant cavity. Constructive Interference between these modes can cause the laser light to be produced as a train of pulses. The laser is then said to be 'phase-locked' or 'mode-locked'.

Among these, ophthalmology clinics account for the highest revenue share of the market. This segment is anticipated to be valued at US\$ 305 Mn in 2017 and surpass US\$ 500 Mn in revenues by 2025.

The global Excimer and Femtosecond Ophthalmic Lasers market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
