Abstracts

This report studies the global Exosome Diagnostic and Therapeutics market status and forecast, categorizes the global Exosome Diagnostic and Therapeutics market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, Asia-Pacific, South America, and Middle East & Africa.

Exosomes are cell-derived vesicles that are present in many and perhaps all eukaryotic fluids, including blood, urine, and cultured medium of cell cultures. A sub-type of exosomes, defined as matrix-bound nanovesicles (MBVs), was reported to be present in extracellular matrix (ECM) bioscaffolds (non-fluid). The reported diameter of exosomes is between 30 and 100 nm, which is larger than low-density lipoproteins (LDL) but much smaller than, for example, red blood cells. Exosomes are either released from the cell when multivesicular bodies fuse with the plasma membrane or released directly from the plasma membrane.

The exosome diagnostic and therapeutics market in North America is estimated to reach a high market valuation by end of 2027 and is projected to grow at a significant rate throughout the period of assessment.

The global Exosome Diagnostic and Therapeutics market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
