Abstracts

EYLEA® (aflibercept) Injection 2 mg (0.05mL) is a prescription medicine approved for the treatment of patients with Wet Age-related Macular Degeneration (AMD).

According to QYResearch's new survey, global Eylea market is projected to reach US\$ 7305.9 million in 2029, increasing from US\$ 5617 million in 2022, with the CAGR of 3.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Eylea market research.

The Eylea market is primarily driven by the increasing prevalence of retinal diseases and the demand for effective treatments. Eylea (aflibercept) is a medication used to treat various eye conditions, including wet age-related macular degeneration (AMD) and diabetic macular edema. The growing aging population and the rise in chronic diseases like diabetes contribute to market growth. Moreover, advancements in ocular therapeutics and the demonstrated efficacy of Eylea in improving visual outcomes further propel adoption. However, challenges include managing the high cost of treatment and ensuring equitable access to care. Navigating the competitive landscape, optimizing treatment protocols, and addressing potential side effects are ongoing concerns. The market's success relies on continuous research to expand the indications for Eylea, collaborations between pharmaceutical manufacturers and ophthalmologists, and comprehensive patient education on the benefits and potential risks of treatment while addressing the evolving challenges associated with retinal disease management and treatment affordability.
