Abstracts

Fat mimetics are water-dispersible fat replacers comprising unique protein or carbohydrate compounds that trap water to provide creaminess and lubricity, thereby mimicking the functional and sensory characteristics of fat.

According to QYResearch's new survey, global Fat Mimetics market is projected to reach US\$ 5563.6 million in 2029, increasing from US\$ 3836 million in 2022, with the CAGR of 5.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Fat Mimetics market research.

The food market includes both fresh and processed foods. According to our research, the global food and beverage market has a sales revenue of approximately US\$10 trillion. China is the world's number one food and beverage market and the world's number one food and beverage producer. In the market drivers section, the total consumer spending forecast shows that consumption at home is growing faster than consumption away from home. However, food service continues to become increasingly important due to changing lifestyles. In addition, the rise of private label brands is putting pressure on the margins of brand manufacturers as retailers compete for a higher share of product sales.
