## Abstracts

Feed plant-based protein is the protein that is obtained by various grains and pulses. The requirement of protein in food for animals is necessary as they are incapable of producing the proteins which are polymer of amino acid themselves.

According to QYResearch's new survey, global Feed Plant-based Protein market is projected to reach US\$ 5234.4 million in 2029, increasing from US\$ 3423 million in 2022, with the CAGR of 6.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Feed Plant-based Protein market research.

According to our Fee Research Center, in 2022, global total production of feed was about 1.2 billion tons. Key producing regions are Asia, Europe and North America, top ten countries hold about 65% of global feed production. China, United States, Brazil and India, as the top four countries, accounted for half of the total feed production.
