## Abstracts

Foam is a substance that is formed by trapping pockets of gas in a liquid or solid. A bath sponge and the head on a glass of beer are examples of foams. Antifoams are an effective remedy.

Fermentation defoamer refers to the specific defoamer used in fermentation production process defoaming.

The food & beverage application dominated the fermentation defoamer market during the forecast period, closely followed by pharmaceutical in 2016. Feed application is also expected to witness high growth rate between 2017 and 2023 in Asia-Pacific, as a result increasing the demand for fermentation defoamer in the respective regions.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Fermentation Defoamer 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
