This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Ferroelectricity is the phenomenon where spontaneous electric polarization of the material takes place. Ferroelectricity is used in various fields of electronics. The materials exhibiting the phenomenon of Ferroelectricity are called Ferroelectric Materials.

The industry is highly concentration. Most manufacturers are distributed in Japan. Japan dominated producer of Ferroelectric Materials. Japan is the largest market segment of Ferroelectric Materials, with a consumption market share nearly 34.47% in 2016, followed by China.

Sakai Chemical, Nippon Chemical, Fuji Titanium and Ferro occupy the majority of Ferroelectric Materials market, among which Sakai Chemical had the largest market share of about 33.23% for production in 2016. The top four companies occupied about 67.53% of the market in 2016.

There are three main manufacturing processes: solid phase method, oxalate method and hydrothermal synthesis. Solid phase method is the traditional production craft, and uniform fine particles are not easily obtained.

The market is not only influenced by the price, but also influenced by the product performance. The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service.

Consequently, they take the majority of the market share of high-end market. Looking to the future years, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

The global Ferroelectric Materials market is valued at 440 million US\$ in 2017 and will reach 630 million US\$ by the end of 2025, growing at a CAGR of 4.6% during 2018-2025.
