Abstracts

Film Thickness Measuring Systems can measure and analysis of single layer and/or multilayer films in less than a second. The optical properties are obtained from reflection and thickness is measured by detecting the sinusoidal fringe pattern from the sample's specular reflectance.
Thin film measurement instrumentation has evolved from complex, difficult to use systems to today's compact, practical tools that provide a simple but powerful and flexible interface.
At the same time, USA is the largest producer of Film Thickness Measuring System, and some international enterprises have opened manufacturing plants in China.
Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
