Abstracts

Flexible films are primarily manufactured using raw materials such as polypropylene, polyethylene, and polyester. These films are available in the market in several sizes that vary as per the requirement. Additionally, they provide beneficial properties such as high resistance to heat, water, moisture, and chemicals that make them favorable across several end-user industries.

According to QYResearch's new survey, global Flexible Film market is projected to reach US\$ 139240 million in 2029, increasing from US\$ 89350 million in 2022, with the CAGR of 6.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Flexible Film market research.

According to our research, the global packaging films market size is estimated to be around \$144 billion by 2022. The key to the continued growth of packaging films is their affordability, universal convenience, light weight, and sustainability. Being the preferred packaging solution for several industries, packaging films are also expected to grow further during the forecast year. Polyethylene (PE) will remain the leading segment with a dominant market share of 5% by 2021. With a market share of nearly 36%, the PE films business holds the largest share of the global packaging films market, and the food and beverage industry is expected to remain the most used segment of the packaging films market through 2032.
