Abstracts

Floor scrubber is a device used to clean the floor. The basic floor scrubber was introduced in the 1920s. The modern floor scrubber, which is also referring automatic floor scrubber, was not invented until the middle of the 20th century. It uses a system that generally involves spraying the floor with a combination of cleaning chemicals and water, scrubbing the floor to break up spill, residue and dirt, and then a squeegee-vacuum combination that absorbs the used water, leaving the floor completely dry and clean. Now, floor scrubbers are widely used in these public places like supermarkets and modern malls.

In this report, the data we provide is all about the automatic floor scrubbers, has no relationship with the basic floor scrubber used in home.

In Japan market, the consumption of Floor Scrubber increases from 23973 Units in 2013 to 39810 Units in 2024, at a CAGR of 4.60%. In classification, Floor Scrubber can be divided into Walk-behind Floor Scrubber, Ride-on Floor Scrubber and Stand-on Floor Scrubber. There is a big price gap in difference products.
