Abstracts

Fluoride fibers are optical fibers based on fluoride glasses, e.g. fluoroaluminate or fluorozirconate glasses. The cations of such glasses are usually from heavy metals such as zirconium or lead. Fluorozirconate glasses (where ZrF₄ is the major component) are a typical example, and among them ZBLAN glass (ZrF₄-BaF₂-LaF₃-AlF₃-NaF) is the most common. Such fibers can be doped with a number of rare earth ions for application in fiber lasers and amplifiers. There are also indium fluoride fibers (fluoroindate fibers) with improved infrared transmission at longer wavelengths.

According to QYResearch's new survey, global Fluoride Fiber market is projected to reach US\$ 107.2 million in 2029, increasing from US\$ 72 million in 2022, with the CAGR of 5.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Fluoride Fiber market research.

At present, the global communications industry is developing rapidly, with new technology highlights such as meta-universe, 5G, cloud technology application, artificial intelligence and big data, etc., which have become the main driving force for the rapid updating and iteration of the communications industry. From the perspective of competition, the industry concentration of each segment of the global communications industry is relatively high at present, and the leading companies are mainly concentrated in China and the United States. And as the R&D investment of the leading companies increases, and the related technology development becomes more and more mature, the healthy competition and cooperation among the enterprises is expected to boost the scale of the global communications industry to further increase. According to our research, the global communications industry market size in 2022 will be about 286.1 billion U.S. dollars.
