Abstracts

Fluorinated lubricants are special grade synthetic lubricants, which possess superior properties as compared to petroleum based lubricants. Most of the petroleum based lubricants fail to perform under -18°C and above 100°C ; the fluorinated lubricants can effectively perform between -90°C and 300°C . Apart from extensive temperature endurance, significant endurance under high load conditions, hydrophobic nature, chemical inertness, oxidation resistant, etc. are some other important properties of fluorinated lubricants. Fluorinated lubricants are available as both oil and grease. This report mainly studies fluorine-based grease market.

According to QYResearch's new survey, global Fluorinated Grease market is projected to reach US\$ 472.3 million in 2029, increasing from US\$ 366.8 million in 2022, with the CAGR of 3.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Fluorinated Grease market research.

Global fluorine-based grease includes DuPont, Chemours, etc. Global top 3 companies hold a share over 60%. North America is the largest market, with a share over 30%, followed by Europe and China with the share about 30% and 20%. In terms of product, perfluoropolyether grease is the largest segment, with a share over 70%. And in terms of application, the largest application is aerospace, with a share about 30%.
