Abstracts

Fluorite, also called fluorspar, is the common name of the mineral having chemical composition calcium fluoride (CaF₂). It is a mineral with veritable bouquet of brilliant colors from hallmark color purple to blue, green, yellow, colorless, brown, pink, black and reddish orange. The rich purple color is by far the most famous and popular color. It is an important commercial source of fluorine. Fluorite plays a vital role in the manufacture of aluminium, gasoline, insulating foams, refrigerants, steels and uranium fuel.

Fluorite can be divided in to three types according to the CaF₂ content: acid grade, metallurgical grade and others. Acid grade fluorite is used in the production of chemical industry, especially the production of hydrofluoric acid. Metallurgical grade fluorite is widely used in metallurgical and building material industry.

In the past few years, fluorite ex-factory price fluctuated from 258 USD/MT in 2013 to 277 USD/MT in 2018. However, the gross margin still maintained at a high level due to low labor cost and abundant raw material resource.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Fluorite 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Fluorite 3900
