Abstracts

Flupyradifurone acts on the central nervous system of target pests and is an insect nicotinic acetylcholine receptor (nAChR) agonist.

Its effect is similar to the natural neurotransmitter acetylcholine, which binds to the receptor protein, activates the receptor to produce a biological response, induces depolarized ion current, and puts the nerve cells in an excited state.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Flupyradifurone market in 2020.
