## Abstracts

This report studies the global Food Grade Phosphate market status and forecast, categorizes the global Food Grade Phosphate market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, Asia-Pacific, South America, and Middle East & Africa.

A phosphate is a chemical derivative of phosphoric acid. The phosphate ion is an inorganic chemical, the conjugate base that can form many different salts. In organic chemistry, a phosphate, or organophosphate, is an ester of phosphoric acid. Of the various phosphoric acids and phosphates, organic phosphates are important in biochemistry and biogeochemistry (and, consequently, in ecology), and inorganic phosphates are mined to obtain phosphorus for use in agriculture and industry. At elevated temperatures in the solid state, phosphates can condense to form pyrophosphates.

The agriculture segment reflects a significant growth rate as compared to other application segments, and is anticipated to register a CAGR of 2.1% during the period of forecast (2017 to 2025).

The global Food Grade Phosphate market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
