## Abstracts

This report studies the global Frame Filter Press market status and forecast, categorizes the global Frame Filter Press market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

A filter press is a solid-liquid separation device that uses the principle of pressure feeding. It has a series of filter plates arranged together and recessed plates or frames that are arranged in an alternative manner. The filter medium is arranged in between the filter press plates. A feeding pump is used for forcing liquid through a medium, thus leaving solids trapped inside. When compared with other pressure filters, the filter press holds a higher volume of solids per square foot of the filtering surface area. The closer which is required is hydraulically or manually operated. It contains a controller, which presses the filter plates together, thus creating a sealed unit. The hydraulic system, which is best suited for dewatering applications, is typically dependent on the size of the filter press required.

The latest trend gaining momentum in the market is emergence of next generation filter presses. The next generation pneumatic filter presses are safe, easy to handle, and have competitive pricing. These filter presses are technologically advanced and do not rely on electricity. They can operate by simply connecting to compressed air. One of the major drivers for this market is growing awareness for waste water treatment. The demand for clean water is ever growing. Thus, the use of wastewater is gaining momentum as a reliable alternative source of water that can be tailored to meet water requirements. A shift over the past few years in wastewater management, from its treatment and disposal to its reuse, recycle, and recovery, has led to a new concept of wastewater, not as a problem but a source of energy and other resources, including water itself. The major factors hindering the growth of this market is Closure of mines

due to environmental concerns. Many mines worldwide are being shut due to environmental concerns. There are few mines that are being closed temporarily due to the downfall in commodity prices across the world. In 2017, the Department of Environment and Natural Resources (DENR) announced the closure of 23 mining operations in many areas in the Philippines.

The global Frame Filter Press market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
