In this report, we study the food for special medical purposes for the dietary management.

According to QYResearch's new survey, global FSMP for Infants Dietary Management market is projected to reach US\$ 916.3 million in 2029, increasing from US\$ 400 million in 2022, with the CAGR of 12.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole FSMP for Infants Dietary Management market research.

The FSMP (Food for Special Medical Purposes) for Dietary Management of Preterm Infants and Low Weight Infants market is primarily driven by the critical need for specialized nutrition to support the growth and development of vulnerable infants. FSMPs are formulated to provide essential nutrients for preterm and low birth weight infants who have specific dietary requirements. The increasing rates of preterm births and the emphasis on optimizing neonatal care, coupled with advancements in neonatology and nutritional science, contribute to market growth. Moreover, the demonstrated benefits of FSMPs in reducing complications and promoting healthy growth further propel adoption. However, challenges include formulating nutritionally balanced products that cater to the unique needs of premature and low weight infants and addressing potential safety concerns related to ingredient sourcing and preparation. Navigating regulatory approvals, tailoring nutrition plans to individual infants' needs, and ensuring effective communication between healthcare providers and parents are ongoing concerns. The market's success relies on continuous research in infant nutrition, collaborations between medical nutrition manufacturers and healthcare professionals, and comprehensive education on the benefits and potential risks of

FSMPs for preterm and low birth weight infants while addressing the evolving challenges associated with neonatal care and nutritional support.
