Abstracts

This report studies the global Full Ice Protection System (FIPS) market status and forecast, categorizes the global Full Ice Protection System (FIPS) market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Full Ice Protection System is designed to keep atmospheric ice from accumulating on aircraft surfaces (particularly leading edges), such as wings, propellers, rotor blades, engine intakes, and environmental control intakes. If ice is allowed to build up to a significant thickness it can change the shape of airfoils and flight control surfaces, degrading the performance, control or handling characteristics of the aircraft. An ice protection system either prevents formation of ice, or enables the aircraft to shed the ice before it can grow to a dangerous thickness. Aircraft and engine ice protection systems are generally of two designs: either they remove ice after it has formed, or they prevent it from forming. The former type of system is referred to as a de-icing system and the latter as an anti-icing system.

And the onboard Ice Protection Systems is the only product we mentioned in this report.

The global Full Ice Protection System (FIPS) market is valued at 900 million US\$ in 2017 and will reach 1560 million US\$ by the end of 2025, growing at a CAGR of 8.2% during 2018-2025.
