## Abstracts

Fused Deposition Modeling (FDM) or Fused Filament Fabrication (FFF) is one of the most commonly used 3D printing technology. The high usability and increased practicality of 3D printing of complex shapes has led to this high popularity of the technology.

According to QYResearch's new survey, global Fused Deposition Modeling 3D Printing Technology market is projected to reach US\$ 774.8 million in 2029, increasing from US\$ 725 million in 2022, with the CAGR of 9.0% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Fused Deposition Modeling 3D Printing Technology market research.

3D printing, also known as additive manufacturing, is a manufacturing method based on a digital model file, using powdered metals, plastics and other materials to lay out the print layer by layer, and finally form a three-dimensional object. Currently, it has been gradually applied in industrial design, aerospace, construction, medical and other fields to print models, parts and even final products. According to our research, the global 3D printing market size is about \$15.3 billion in 2022, with the highest share coming from 3D printing services. The industry that uses 3D printing the most is the automotive industry, which is a distant second, followed by the consumer/electronics sector and aerospace. The current global 3D printing head players are mainly concentrated in the US.
