This report studies the global Gantry/Cartesian Robots market status and forecast, categorizes the global Gantry/Cartesian Robots market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Gantry/Cartesian Robots are mechatronic devices that use motors and linear actuators to position a tool. They make linear movements in three axes, X, Y, and Z.

The basic form of a cartesian robot consists of three 'arms.' Each arm can move only along a two dimensional axis — it can only move backward or forwards or, if the arm is vertical, up or down. Each arm is at a right angle to the other two, though, which allows the robot to utilize the motions of all three arms to reach various points in a three-dimensional space. These arms can vary tremendously in size, depending on the purpose of the robot. In some particularly large designs, the horizontal arm will have support on both ends. This is called a gantry robot.

Gudel AG, IAI, and Parker captured the top-three revenue share spots in the Gantry/Cartesian Robots market in 2014. IAI dominated with 13.15 percent Production share, followed by Gudel AG with 12.35percent Production share and Parker with 7.98 percent Production share.

With the rapid growth of the national economy as well as the rapid development of downstream industries, Chinese Gantry/Cartesian Robots market demand is exuberant, provide a good opportunity for the development of Gantry/Cartesian Robots market and technology.

The global Gantry/Cartesian Robots market is valued at 2360 million US\$ in 2017 and will reach 6930 million US\$ by the end of 2025, growing at a CAGR of 16.6% during 2018-2025.
