Abstracts

Fumigation is a method of pest control that completely fills an area with gaseous pesticides—or fumigants—to suffocate or poison the pests within. It is used to control pests in buildings (structural fumigation), soil, grain, and produce, and is also used during processing of goods to be imported or exported to prevent transfer of exotic organisms. This method also affects the structure itself, affecting pests that inhabit the physical structure, such as woodborers and drywood termites.

According to QYResearch's new survey, global Gas Fumigation Service market is projected to reach US\$ 1412.4 million in 2029, increasing from US\$ 836 million in 2022, with the CAGR of 7.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Gas Fumigation Service market research.

Pest control (pest control) is to mitigate or prevent pathogenic microorganisms and pests from harming crops or humans and animals, and man-made means, generally can be divided into chemical control using chemicals such as insecticides and physical control using physical energy such as light or rays, or the construction of barriers. According to our research, the global pest control market size will be approximately USD 22 billion in 2022. The key global professional pest control key players are Rollins, Ecolab, Rentokil, Anticimex and others. Whether it is your home, factory or company or an entertainment and dining place, the presence of pests such as cockroaches termites rats and mice is not an easy thing to solve. As times change, these pests have evolved to be more and more drug resistant, which requires companies to constantly update new control chemicals and programs, which is the basis for the industry's perpetual demand and continued prosperity.
