Abstracts

A gas turbine, also called a combustion turbine, is a type of internal combustion engine. It has an upstream rotating compressor coupled to a downstream turbine, and a combustion chamber or area, called a combustor, in between.

The classification of gas turbine services includes heavy duty services and aero-derivative services, and the proportion of heavy duty services is about 79% in 2016, and the proportion is in increasing trend from 2012 to 2017.

Gas turbine services are for power generation, oil & gas and other field. The most proportion of gas turbine services is for power generation, and the revenue in 2016 is about 7.61 billion USD.

Middle East region enjoys largest revenue market share in the world, with a revenue market share nearly 32% in 2016. Following Middle East, North America is the second largest place with the revenue market share of 30%.

Market competition is intense. General Electric, Siemens, Mitsubishi Hitachi Power Systems, Wood Group, etc. are the leaders of the industry, and they hold key technologies and patents, with high-end customers; have been formed in the monopoly position in the industry.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Gas Turbine 4900 market in 2020.
