This report studies the global Gear Reducer market status and forecast, categorizes the global Gear Reducer market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Gear reducers are generally used for low-speed and high-torque transmission equipment. Common gear reducers of motors also have several pairs of identical gears to achieve the ideal deceleration effect. The ratio of the number of gears of large and small gears is the gear ratio. With the constant development of the reducer industry, more and more companies are using reducers.

Gear-reducers, also known as speed reducers, are a component of many mechanical, electrical, and hydraulic motors. Essentially, a gear or series of gears are combined in such a way as to increase the torque of a motor. The torque increases in direct proportion to the reduction of rotations per unit of time. A gear reducer is a mechanism by which the energy output of a high-speed motor or engine is redirected to turn another mechanical component at a lower rotational speed and at a higher torque. Gear reducers are devices that can take several forms. They are also referred to as gear boxes or gear shifters and are simple transmissions. Gear reducers also offer mechanical safety by dropping the speed of rotating equipment. In its simplest form, gear lessening takes place in set ratios that are connected to a characteristic value of the input and output gear components.

The global Gear Reducer market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
