Abstracts

There are three basic types of clothes hangers. The first is the wire hanger, which has a simple loop of wire, most often steel, in a flattened triangle shape that continues into a hook at the top. The second is the wooden hanger, which consists of a flat piece of wood cut into a boomerang-like shape with the edges sanded down to prevent damage to the clothing, and a hook, usually of metal, protruding from the point. Some wooden hangers have a rounded bar from tip to tip, forming a flattened triangle. This bar is designed to hang the trousers belonging to the jacket. The third kind and most used in today's world are plastic coat hangers, which mostly mimic the shape of either a wire or a wooden hanger. Plastic coat hangers are also produced in smaller sizes to accommodate the shapes of children's clothes.

According to QYResearch's new survey, global General Hanger market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029.

The global general hanger market is expected to witness steady growth due to the continuous demand from the clothing retail industry and residential consumers. Trends towards sustainability and customization, along with the influence of e-commerce, will shape the market as manufacturers strive to meet evolving customer needs and preferences.
