## Abstracts

The Fiber Prepreg is a kind of reinforced semi finished plastics product with resin as base material. The Commonly used fiber includes carbon fiber, glass fiber and other fiber. Glass Fiber Prepreg is conventional glass fabric that has been specially pre-impregnated with catalysed resin during manufacture.

As the development of aerospace, automotive, energy, the demand for glass fiber prepreg has been consistently growing.

There are many reasons why glass fiber prepreg makes sense in some concrete structures. The prepregs has several advantages, such as maximum strength properties, part uniformity and repeatability, less mess and less waste, less curing time, better cosmetics and so on. Further, the cost of fiber prepreg has not increase much. In contrast, the price of it's materials including glass fiber and resin has been falling because of overburdened market.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
