This report studies the global GPS Tracker market status and forecast, categorizes the global GPS Tracker market size (value & volume) by manufacturers, type, application, and region.

This report focuses on the top manufacturers in United States, Europe, China, Japan, South Korea and Taiwan and other regions.

A GPS tracking unit is a GPS device, normally carried by a moving vehicle or person, that uses the Global Positioning System (GPS) to track the device's movements, at intervals, and to determine its location, and its carrier. The recorded location data can be stored within the tracking unit, or it may be transmitted to a central location database, or Internet-connected computer, using a cellular (GPRS or SMS), mobile number radio, or satellite modem embedded in the unit. This allows the asset's location to be displayed against a map backdrop either in real time or when analysing the track later, using GPS tracking software. Data tracking software is available for smartphones with GPS capability.

In terms of value, advanced trackers segment is projected to be the most attractive in the global GPS tracker market during the forecast period.

The global GPS Tracker market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
