Abstracts

Grey cardboard is a very economical material, made from recycled paper and has a smooth surface.

According to QYResearch's new survey, global Gray Cardboard market is projected to reach US\$ 9066.3 million in 2029, increasing from US\$ 7320.4 million in 2022, with the CAGR of 3.1% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Gray Cardboard market research.

Due to the limited foreign waste quota, small and medium-sized paper mills mainly rely on high-priced national waste for production, and the small and medium-sized paper mills lack the bargaining power in the finished paper market, so they mostly adopt fast-in and fast-out, cash is king, and their inventories are relatively low. Affected by fluctuations in market raw material prices and price adjustments for finished products of large paper mills, profit margins were squeezed. For small and medium-sized paper mills, the price of national waste is an important reason to limit the price adjustment of their finished paper.
