Abstracts

Viscosupplementation is a medical procedure during which lubricating fluid is injected into a joint. Also called hyaluronic acid injections or hyaluronan injections, viscosupplementation is most commonly used to treat symptoms of symptoms of knee osteoarthritis.

According to QYResearch's new survey, global HA Viscosupplementation market is projected to reach US\$ 2329.4 million in 2029, increasing from US\$ 1822 million in 2022, with the CAGR of 3.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole HA Viscosupplementation market research.

Viscosupplementation involves the injection of hyaluronic acid-based solutions into the joints to relieve pain and improve mobility in patients with osteoarthritis. Factors driving market growth include the increasing prevalence of osteoarthritis, growing aging population, and the effectiveness of viscosupplementation in managing symptoms. The market is highly competitive, with several manufacturers offering viscosupplementation devices. However, challenges such as limited insurance coverage, high treatment costs, and the availability of alternative therapies may hinder market expansion. Nonetheless, the viscosupplementation devices market holds promising opportunities, driven by the rising demand for non-surgical treatment options for osteoarthritis and ongoing research and development efforts to enhance the efficacy of viscosupplementation products.
